Gesellschaft für Biotechnologische Forschung mbH (GBF)

5-THIAEPOTHILONES AND 15-DISUBSTITUTED EPOTHILONES

The present invention relates to 5-thiaepothilones and 15-disubstituted epothilones which are 16-membered cytotoxic macrolides of formula I with an application potential in cancer therapy and in the treatment of other instances of cell growth impairment.

Epothilones are well known. They can be obtained by fermenting the myxobacterium *Sorangium cellulosum* (GBF) by semisynthesis (GBF, BMS) by genetic engineering and heterologous expression (Kosan Biosciences), by total synthesis (Danishefsky, Nicolaou, Schinzer, Novartis, Schering).

All the epothilones which have become known so far have the common characteristic of carrying a keto group ($X = \text{carbonyl}$) in position 5 and a hydrogen ($R^3 = H$) on the C15 atom. The present invention relates to epothilones which, in contrast to the known state of the art, exhibit either

- (1) a sulphoxide group for X or
- (2) an alkyl or alkenyl group by way of R^3 on the C15 carbon atom or
- (3) both a sulphoxide group X and an alkyl or alkenyl group as radical R^3 .

The invention also relates to epothilones of the following general formula I:

with the following meanings:

$X = >C=O$ or $>S=O$

$R^1 = C_{1-6}$ alkyl or C_{2-6} alkenyl

$R^2 = H$ or C_{1-6} alkyl

$Y-Z = >C=C<$ or $>\underline{C-O-C}<$ (epoxide ring)

$R^3 = H$, C_{1-6} alkyl or C_{2-6} alkenyl

$R^4 =$ bicycloaryl, bicycloheteroaryl or $-C(R^5) = CH-R^6$,

where

$R^5 = H$ or CH_3 and

$R^6 =$ aryl or heteroaryl

X not being $>C=O$ if $R^3 = H$.

A compound of the general formula I with $Z-Y = >C=C<$ can be produced from a compound of formula 1 by aldol reaction with a compound of formula 2. In the following reaction scheme, P represents a protective group common in epothilone chemistry, such as a silyl group. Subsequently, the compound of formula 3 thus obtained is reacted, with ring closure (formation of lactone), to a compound of formula 4.

A compound of the general formula I with $Y-Z = >\underline{C-O-C}<$ (epoxide ring) can be produced by reacting a compound of formula 5 with a compound of formula 6 in an aldol

reaction. The resulting compound of formula 7 can be cyclised after liberating the aldehyde group from the acetal in an aldol reaction, whereupon the lactone thus obtained is subjected to epoxidation in position 12,13.

Below, the invention is further illustrated by two synthesis examples.

Synthesis example Ia: $X = SO$, $R^1, R^2 = CH_3$,

$Z - Y = C=C$, $R^3 = H$, $R^4 =$ 

with $R^5 = CH_3$, $R^6 = 4-(2\text{-methylthiazol-4-yl})$

P = protective groups, e.g. silyl

Net_3 , DMAP, pyridine

5-thiaepothilone

Synthesis example Ib: $X = C = O$, $R^1, R^2 = CH_3$,

= 15-Methyl epothilone B

CLAIMS

1. Epothilone of the general formula (I):

with the following meanings:

X = >C = O or >S = O and/or

R¹ = C₁₋₆ alkyl or C₂₋₆ alkenyl and/or

R² = H or C₁₋₆ alkyl and/or

Y - Z = >C=C< or >C-O-C< (epoxide ring) and/or

R³ = H, C₁₋₆ alkyl or C₂₋₆ alkenyl and/or

R⁴ = bicycloaryl, bicycloheteroaryl or -C(R⁵) = CH-R⁶,

where

R⁵ = H or CH₃ and

R⁶ = aryl or heteroaryl,

X not being >C=O if R³ = H,

and one, a plurality or all conceivable combinations of the radicals X, R¹, R², R³, R⁴, R⁵, R⁶ and Y - Z

2. Epothilone according to claim 1, where R⁴ is a bicycloaryl or bicycloheteroaryl radical common in epothilone chemistry.
3. Epothilone according to claim 1, where R⁶ is an aryl or heteroaryl radical common in epothilone chemistry.

4. Epothilone according to claim 3, where the heteroaryl radical is a monocyclic 5 or 6-membered heteroaromatic which may exhibit one or a plurality of O and/or N and/or S atoms in the ring.
5. Epothilone according to claim 3, where the aryl radical may be a heteroaromatic with one or a plurality of and in particular 1, 2, 3 or 4 heteroatoms.
6. Agent for cancer therapy and/or treating other instances of cell growth impairment, consisting of or containing one or a plurality of epothilones according to any one of the preceding claims, apart from the usual auxiliary agents.
